A leading maker of **deluxe ceramics**

The strength and international breath of Panariagroup.

Panariagroup is one of the leading manufacturers of ceramic tiles for floors and wall cladding in the world. The group has production sites in Italy, Portugal, USA and has a presence in over **one hundred countries** thanks to a broad, established and widespread sales network. Specialised in the production of porcelain stoneware tiles, the company is positioned in the **ultra-luxury market segment** targeting a differentiated and discerning customer-base looking for top quality aesthetics and technology.

Highlights

Panariagroup has a presence in over 100 countries in the world.

The group positions itself in the high-luxury market segment

Bellissimo: our **values**

Elegance

The charm of Italian style: an aesthetic culture that has imposed its taste across the world, enhancing the most prestigious of living spaces.

Innovation

Ongoing research into materials, to constantly improve our aesthetic, technical and quality standards.

Technology

Evolution, performance and know-how co-exist and share a perfect balance that represents the maximum of “Italian-ness” in the world.

The **technology** know-how

Avant-garde machinery and constant innovation for unrivalled quality standards.

Panariagroup has always set itself apart thanks to its focus on research and innovation. The numerous production sites of the group are equipped with cutting edge machinery and production tools and the company also has an in-house research centre able to develop avant-garde application and aesthetic solutions, which help the company maintain its position as one of the industry leaders across the world.

Highlights

In-house research centre equipped with advanced technology. Innovation means evolution and ability to improve products quality.

Borealis

Colors, veins and small realistic imperfections recall nature, making your space surprisingly unique and contemporary

DL High Tech

Double loading:
Trough this exclusive technological process the purest micronized raw materials are fully combined in two overlapping layers which are then pressed together with the pressure of 7.500 tonnes. This perfect compaction gives the product an extraordinary resistance to impact.

Cleaning

“AFTER-INSTALLATION” CLEANING

1. “After-installation” cleaning is compulsory, both for glazed and non-glazed tiles.
2. An after-installation cleaning carried out not accurately, or not carried out at all, often results in halos preventing the floor to be kept clean despite of a careful daily cleaning.
3. To ensure an optimal cleaning, the use of a single brush with suitable disks (green for structured/anti-slip surfaces, red for the others) is recommended.
4. CEMENTITIOUS GROUTS MIXED WITH WATER
To ensure an optimal cleaning, the use of a single brush with suitable disks (green for structured/anti-slip surfaces, red for the others) is recommended.

Residue to be removed	Cementitious grouts, slurry, cement, lime			
Detergent type	Acid-based			
Detergent name	KERANET	CEMENT REMOVER	DETERDEK	LITOCLEAN PLUS
Manufacturer	MAPEI	FABERCHIMICA	FILA	LITOKOL

For the use, follow the specific instructions by the manufacturers.
After performing the washing described above, it is necessary to wash with a basic or alkaline product, namely a degreasing detergent (see point 5 of table). Acid washing can leave greasy marks on the floor, which tend to withhold dirt.

NOTE: for cementitious grouts with additives (latexes, resins, etc.), remove immediately with sponge and plenty of water. Then, treat the floor according to the instructions in points 3 and 4.
Always make preventive tests before the use (on a tile not laid yet), above all on lapped or polished products.
Do not carry out the “after-installation” cleaning if the tile temperature is high; in summer, clean during the fresher hours of the day.

5. EPOXY GROUTS

The removal must be carried out immediately and carefully with sponge and plenty of water, as these grouts harden very fast, even in a few minutes.The following day carry out a thorough cleaning with alkaline detergents; a few of them are indicated in the table below.

Operation	Thorough cleaning			
Detergent type	Alkali-based			
Detergent name	WAX REMOVER	PS 87	CIF Degreaser with bicarbonate	LITONET
Manufacturer	FABERCHIMICA	FILA	UNILEVER ITALIA	LITOKOL

For the use, follow the specific instructions by the manufacturers.

Cleaning

6. ANTI-SLIP SURFACES

Due to their special features, rough or structured anti-slip surfaces are harder to clean. After the grouting, it is important to remove the excesses in a short time and by frequent washing with sponge and water, till the floor is perfectly clean. Then, carry out an acid washing using a single brush with green disks.

DAILY CLEANING

Carry out the daily/routine cleaning with neutral detergents or degreasers, diluted in warm water, following the procedures indicated on the packages. The following products, which can be easily found on the market, are recommended.

Operation	Daily cleaning				
Detergent type	Neutral or degreaser				
Detergent name	GLASSEX degreaser	SMAC ULTRA degreaser	CIF Degreaser with bicarbonate	FLOOR CLEANER	FILA CLEANER
Manufacturer	RECKITT BENCKISER	BOLTON MANITOBA	UNILEVER ITALIA	FABERCHIMICA	FILA

EXTRAORDINARY CLEANING

It is carried out to remove very old or resistant stains or residues. The table below indicates detergents suitable for the stain type.

Residue to be removed	Coffee, coke, fruit juices, waxes, greases, etc...			Wine	Calcareous deposits	Rust	Inks, felt pens		Tyres, rubber marks, suckers, metal or pencil marks			
Detergent type	Neutral or degreaser			Oxidizing	Acid-based	Acid-based	Thinner-based		Abrasive paste			
Detergent name	Coloured Stain Remover	PS 87	CIF Degreaser with bicarbonate	OXIDANT	VIAKAL	Diluted hydrochloric acid	Nitro thinner, trichloroethylene, turpentine	Coloured Stain Remover	VIM CLOREX	POLISHING CREAM	DETERGUM	Eraser (for pencil marks only)
Manufacturer	RECKITT BENCKISER	FILA	UNILEVER ITALIA	FABER-CHIMICA	PROCTER & GAMBLE	Several manufacturers	Several manufacturers	FABER-CHIMICA	GUABER	FABER-CHIMICA	ZEP ITALIA	-

IMPORTANT: always make preventive tests before the use (on a tile not laid yet), above all on lapped or polished products.

Cleaning

REMOVAL OF WAXES OR POLISHING COATS

Do NOT use waxes on floor and wall tiles.

			
New floor that has been cleaned after installation in accordance to the instructions provided on the previous pages.	Detergents for routine cleaning that contain wax tend to deposit on the floor and create glossy films.	Simple substances (Coca Cola, wine, water, etc.) will remove this glossy film and give the floor its initial matt appearance.	To remove the glossy film, use a suitable detergent (undiluted Tile Cleaner by Faber). Daily cleaning should be performed using a detergent that does not contain wax.

Often, the standard detergents available on the market contain waxes or polishing additives that, washing after washing, deposit glossy coats on the floor causing halos and problems. This kind of coats can be deposited even by some grouts for joints. Simple agents such as coke, wine, water, etc... falling on the floor remove this glossy coat and restore the original duller look of the tiles. Amid a glossier floor, the areas without wax look like dull halos: instead, they are the only clean floor areas. In these cases, first of all the whole floor must be dewaxed, following the indications of the table below. Then, use the detergents of the table besides for the routine cleaning.

Residue to be removed	Glossy coats left by detergents	
Detergent type	Acid-based	
Detergent name	VIAKAL*	Pure TILE CLEANER *
Manufacturer	PROCTER & GAMBLE	FABERCHIMICA

(*) Do not follow the indications on the package, rather apply the pure detergent, leave it for 15-30 minutes, rub with soft or lightly abrasive pads (white, yellow, red), then rinse thoroughly with water.
